

INSTRUCTIONS FOR GRAPHIC DESIGN

The lengths available for printing the adhesive tape are as follows:

185mm / 205mm / 250mm / 280mm

Considering a margin of at least 10 mm, the areas useful for the graphic setting are:

175mm / 195mm / 240mm / 270 mm

For a 50mm high adhesive tape, consider a useful printing area of **45mm**, while for a 75mm tape, consider a useful area of **70mm**.

Possibly set the print colors in **Pantone Coated** spot mode, if instead you prefer to work in CMYK mode, we will propose the closest Pantone colors.

If you want to use shades, consider as a useful range from 30% to 70%.

If possible, send the file in **.PDF** or **.EPS** format with characters converted into curves. The minimum thickness of the lines must be **0.25mm**.

Below is an example for the layout of a 50mm tape on a 185mm print area.
